

USE CASE MODELING

PROBLEM STATEMENT: A virtual event platform that allows users to host and attend virtual conferences, webinars, and networking events.

POSSIBLE SCENARIOS ARE:

- Users want to create and host an online event, webinar or conference or any other event.
- Verifying the user and creating a unique address for the event to be hosted and to be joined.
- Verifying the attendees for valid addresses and allowing them to join in with the host User.
- Users need to share their own resources to attendees, like screen sharing, audio sharing, camera access, remote access, file transfers through local network access points or through the internet.
- Allowing the secondary users(attendees) access to share their resources as well.
- Provide the logged in users list to the host.
- Administrative access to the host to modify requirements of the meeting controls.
- Integration with most commonly used Productivity applications like powerpoint, Excel, charts, graphs and mathematical and scientific tools,etc. to reduce load times and improve latency and bandwidth which results in faster and hassle free user experience.
